Full Body Laser Treatment in 45 minutes

ATHENA Technology uses
Super Pulsed Diode Laser
System; Perfect for
ALL SKIN types

 Health Canada Licensed

ATHENA[™]
SUPER ICE 

Boost Profits with North America's Most Powerful & Affordable Laser Hair Removal System

Laser hair removal remains the top-revenue grossing aesthetic treatment and a must-have for an existing aesthetics business or a new one. The ongoing demand to combat hair regrowth creates a steady income stream when equipped with an affordably effective solution.

The **ATHENA SUPER ICE** Diode system delivers a cost-efficient option with no consumable costs, helping to increase your revenue. Using diode laser technology, the **ATHENA SUPER ICE** quickly and effectively removes unwanted hair from the face and body. This Gold-Standard Technology, paired with Super Pulse Modes and a Cooling Tip tested to -31°C, ensures a safe, comfortable treatment for ALL Skin Types.

How Your Business Benefits:			
	Super Gliding Pulse Technology Continuous & static pulse helps reduce aesthetician time in half		For All Skin Types Treat a wide range of patients (Fitzpatrick I - VI)
	Explode your bottom line Attractive cost and no consumables		X-Large Spot Size Comfort-Focused Applicator Design with 12mm x 24mm spot size

Your Competitive Edge

- I Perform Full Body Treatment In 45 Minutes
- II SUPER ICE Cooling Technology
- III Super Glide with Triple Pulse Technology
- IV Convenient User Interface
- V X-Large Spot Size and Comfort-Focused Applicator Design

SUPER ICE ❄️

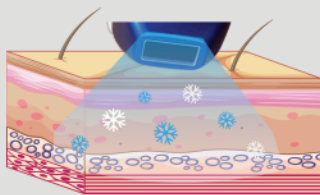

The **ULTIMATE**
Laser Hair Removal Machine

I Perform Full Body Treatment In 45 Minutes

- ❄️ Reduce treatment duration for both patient and aesthetician
- ❄️ Adjust pulse rate according to the treatment area
- ❄️ Static Mode Hair Removal: Up to 1 Hz
- ❄️ Gliding Mode Hair Removal: Up to 10 Hz

II SUPER ICE Cooling Technology

- ❄️ Applicator tested to -31°C Cooling ensures comfortable skin temperature upon contact
- ❄️ Minimizes pain for patient
- ❄️ Enhances safety to Epidermal Tissue

III Super Glide with Triple Pulse Technology

Improve treatment outcomes and reduce discomfort with multiple Specialized Super Gliding Pulse Functions. By integrating high-power continuous and static pulses with advanced cooling technology, the **ATHENA SUPER ICE** Diode wavelength effectively targets melanin at the root of the hair follicle without damaging any surrounding tissue. Pulses for both the gliding and static modes have been designed and engineered to keep patient comfort a priority.

IV Convenient User Interface

Easy to use interface with built-in presets based on Skin type, Cooling Variance & Treatment Areas

2 Treatment Programs

- Hair Removal Static Mode
- Hair Removal Gliding Mode

V X-Large Spot Size and Comfort-Focused Applicator Design

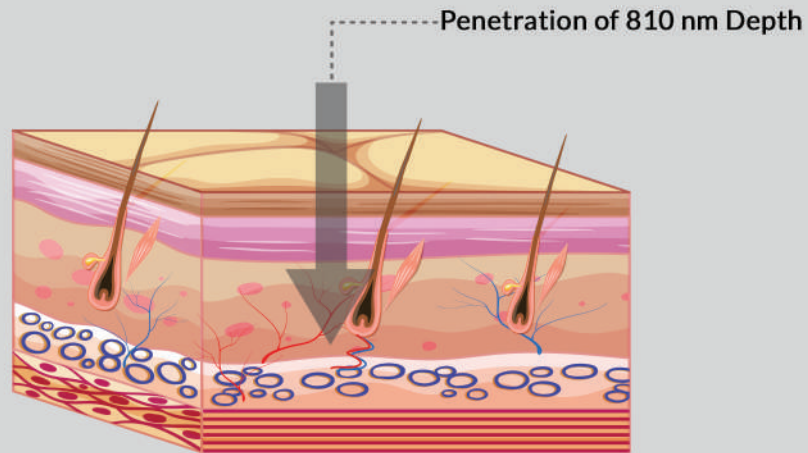

The **ATHENA SUPER ICE** system features a 12mm x 24mm spot size, making it perfect for treating all body areas.

The handpiece shape and trigger are designed to balance the center of gravity, enhancing comfort and ease for the operator.

How It Works?

The **ATHENA SUPER ICE** Diode laser system precisely targets the melanin in hair follicles while protecting the surrounding skin. The energy is absorbed by the hair, effectively destroying the follicle at its root to prevent future growth.

With its X-Large spot size (12mm x 24mm), integrated cooling system, and continuous wave technology, the system provides quick and comfortable treatment for larger areas such as the chest, back, and legs.
